

## 2.17 SYN1deg-Month-lite

The SYN1deg-Month-lite product provides CERES-observed temporally interpolated top-of-atmosphere (TOA) radiative fluxes and coincident MODIS-derived cloud and aerosol properties. Each parameter is available at monthly 1°–regional, zonal and global time-space scales. TOA fluxes are provided for clear and all-sky conditions in the longwave (LW), shortwave (SW), and window (WN) regions. The regional means are determined for 1° equal-angle grid boxes calculated by first interpolating each parameter between the times of the CERES observations in order to produce a complete 1-hourly time series for the month. After interpolation, the time series is used to produce mean parameters. Monthly means are calculated using the combination of observed and interpolated parameters from all days containing at least one CERES observation.

CERES SYN1deg uses 3-hourly radiance and cloud property data from geostationary imagers to more accurately model variability between CERES observations. To use GEO data to enhance diurnal sampling, several steps are involved. First GEO radiances are cross-calibrated with the MODIS imager using only data that is coincident in time and ray-matched in angle. Next, the GEO cloud retrievals are inferred from the calibrated GEO radiances. The GEO radiances are converted from narrowband to broadband using empirical regressions, and then broadband GEO TOA fluxes using ADMs and directional models. To ensure GEO and CERES TOA fluxes are consistent, a normalization technique is used. Instantaneous matched gridded fluxes from CERES and GEO are regressed against one another over a month from the 5°×5° latitude-longitude regions. The regression relation is then applied to all GEO fluxes to remove biases that depend upon cloud amount, solar and view zenith angles as well as regional dependencies. The all-sky GEO-LW TOA fluxes use the same approach as in Edition2 and employ regional instantaneous normalization.

CERES Edition2.6 uses Edition2 algorithms with Edition3 CERES instrument calibration and is a limited parameter precursor product for the full parameter products available after Edition3 has been processed.

SYN1deg-Month contains monthly parameters on a regional, zonal and global basis:

- All-sky and clear-sky radiative SW, LW, and Net fluxes at TOA
- Total cloud properties (not 4-layered) for day and day/night (24-hour)
- Auxiliary parameters, for example aerosol, skin temperature, wind speed used as input to process the CERES fluxes

**Level:** 4

**Frequency:** 1 Monthly File

**Portion of Atmosphere Covered:** TOA

## SYN1deg Metadata

The types of SYN1deg metadata are summarized in [Table 2.17-1](#) and contain information which need only be recorded once per product. The CERES metadata are listed in [Appendix B](#). [Table B-1](#) lists the CERES Baseline Header Metadata and [Table B-2](#) lists the CERES\_metadata Vdata.

Table 2.17-1. SYN1deg-Month Metadata Summary

| HDF Name                       | Description Table         | Records | Number of Fields |
|--------------------------------|---------------------------|---------|------------------|
| CERES Baseline Header Metadata | <a href="#">Table B-1</a> | 1       | 36               |
| CERES_metadata Science Data    | <a href="#">Table B-2</a> | 1       | 14               |

All of the SYN1deg science data are organized into the HDF Grid data type and are contained in: SYN1deg-Month, which is shown in [Table 2.17-2](#) below. The table contains a list of the parameters within each grid, including the field number, the field name, the data type, the units, the range, and the number of elements within each field.

## SYN1deg Scientific Data Sets

## **SYN1deg-Month-lite Revision Record**

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

SYN1deg-Month-lite Revision Record

| <b>SCCR Approval Date</b> | <b>Release/Version Number</b> | <b>SCCR Number</b> | <b>Description of Revision</b> | <b>Section(s) Affected</b> |
|---------------------------|-------------------------------|--------------------|--------------------------------|----------------------------|
| 07/26/11                  | R5V1                          | 860                | • New document.                | All                        |
