CERES-II Science Team Meeting  
Newport News, VA, May 6-8, 2008

**NASA Langley Research Center / Atmospheric Sciences**

# CERES ISCCP-D2-like Products

- Objective: produce monthly mean cloud properties product that emulates ISCCP D2 (NASA GISS) product to meet the needs of climate community.
- Three products: MODIS-day, MODIS-night, and GGEO-day
  - MODIS: use data from **Terra** or **Aqua**, sun-synchronous
  - GGEO: use data from Geostationary Satellites, 3-hourly

# CERES ISCCP-D2-like Cloud types

Cloud top (mb)				
High	10-440	Cirrus	Cirrus-stratus	Deep Convective
		liq=13, ice=16	liq=14, ice=17	liq=15, ice=18
Mid	440-680	Alto-cumulus liq=7, ice=10	Alto-stratus liq=8, ice=11	Nimbo-stratus liq=9, ice=12
Low	1000-680	Cumulus liq=1, ice=4	Strato-cumulus liq=2, ice=5	Stratus liq=3, ice=6
Cloud optical depth		0.0-3.6	3.6-23	23-380
		Thin	Mid	Thick

- Stratify clouds in cloud pressure and optical depth bins
- CERES adds a liquid category to each of the high cloud bins

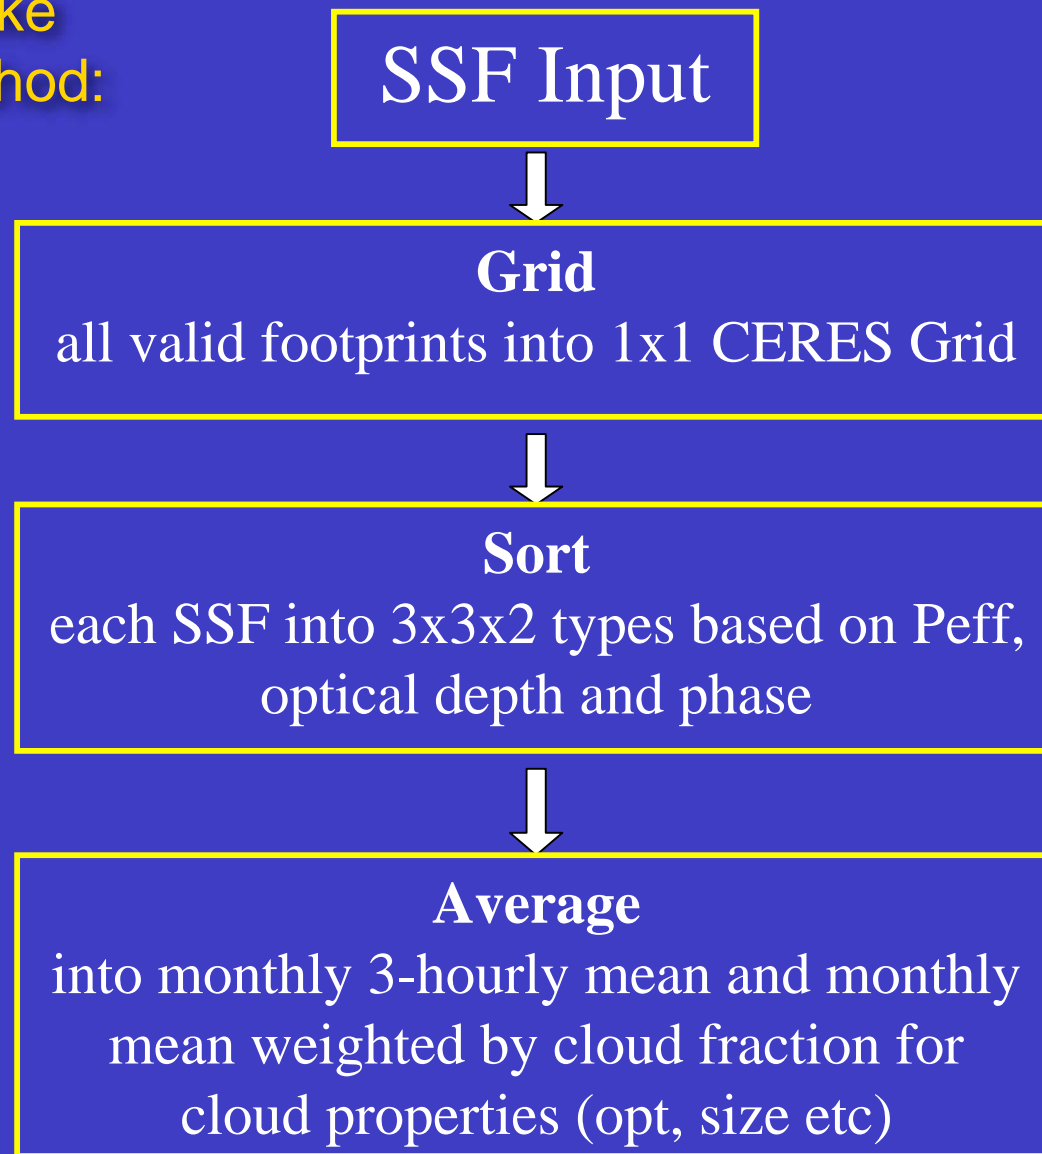

# CERES ISCCP-D2-like Variables

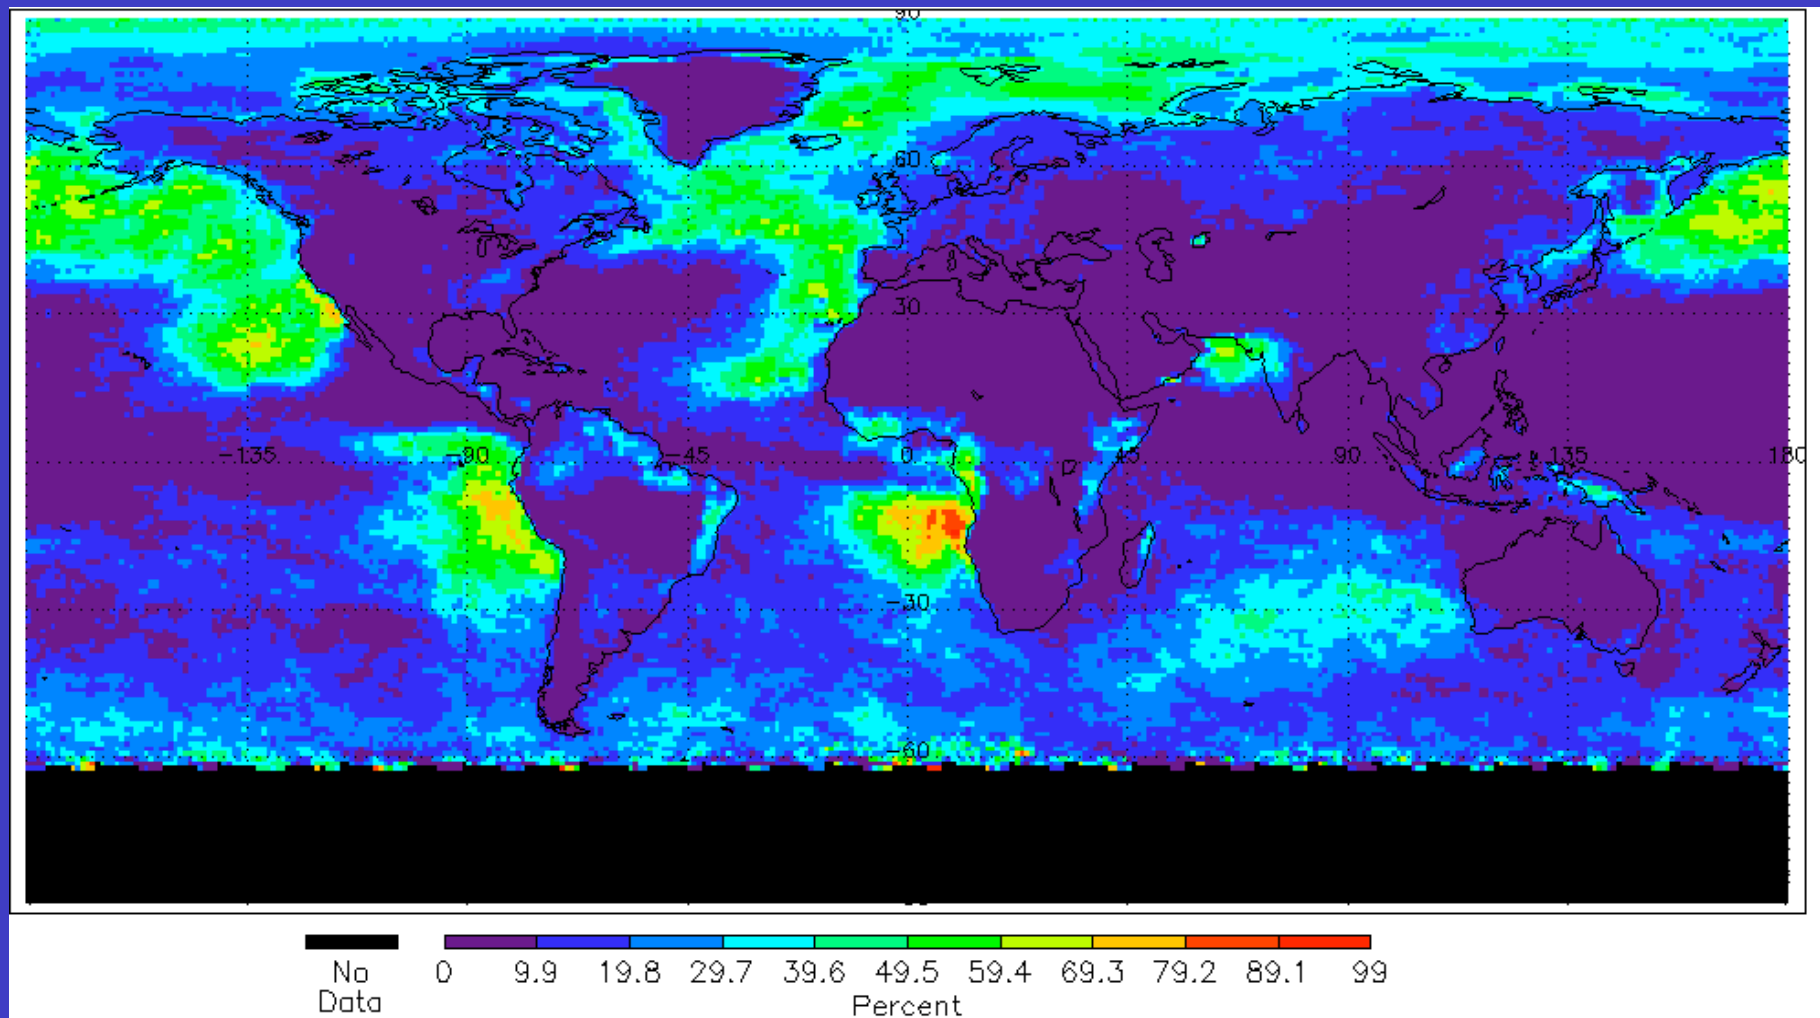

Cloud Parameter	MODIS-only	GEO-only
Cloud Fraction	X	X
Effective Pressure	X	X
Effective Temperature	X	X
Optical Depth	X	X
Liquid/Ice Water Path	X	X
Particle size (liq radius, ice diameter)	X	
Infrared Emissivity	X	
# of obs/GMT box	X	X

ISCCPD2-like  
(MODIS) Method:

# Daytime Terra Stratocumulus (low, mid thin) Cloud Fraction, July 2002

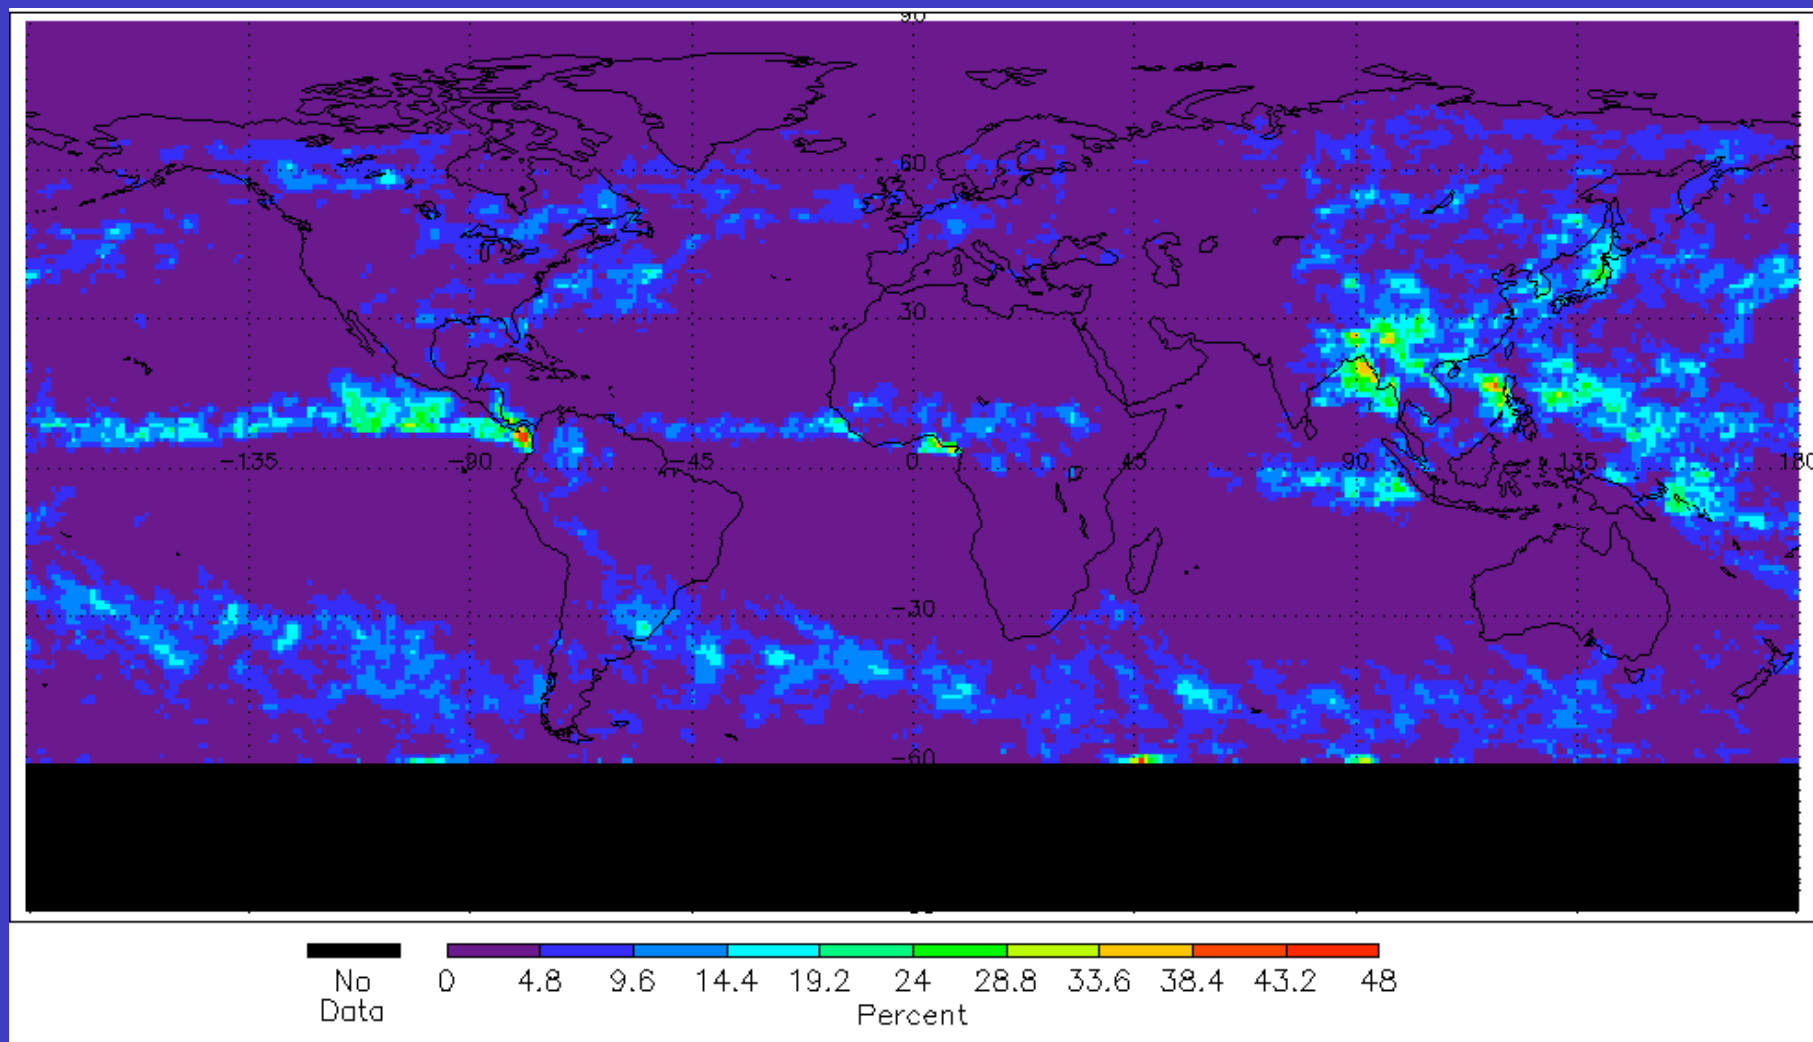

NASA Langley Research Center / Atmospheric Sciences

# Daytime Terra Deep Convective (high,thick) Cloud Fraction, July 2002

**NASA Langley Research Center / Atmospheric Sciences**

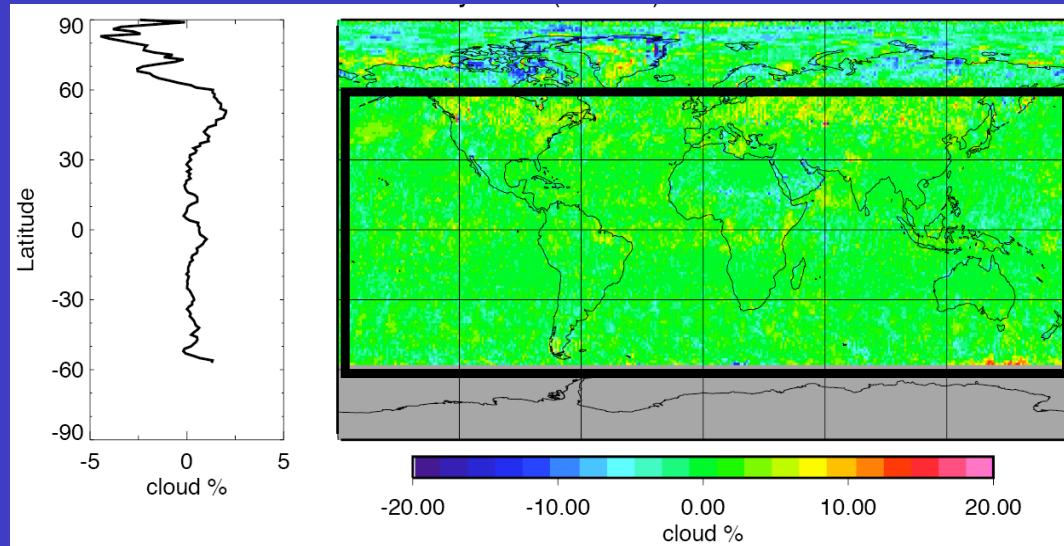

# CERES ISCCP-D2-like MODIS Validation

- Derive total cloud property means from ISCCP-D2-like MODIS and SRBAVG3 (MODIS only) and compare for consistency
  - ISCCP-D2-like employs no temporal interpolation as SRBAVG
  - The Terra product contains cloud properties based on 10:30 AM LST sampling, and Aqua at 1:30 PM
  - From 60°S to 60°N compare with SRBAVG local hourbox 11, over polar regions all daytime/nighttime hours are considered
- Compare total cloud property means with the corresponding Cloud Working Group statistics

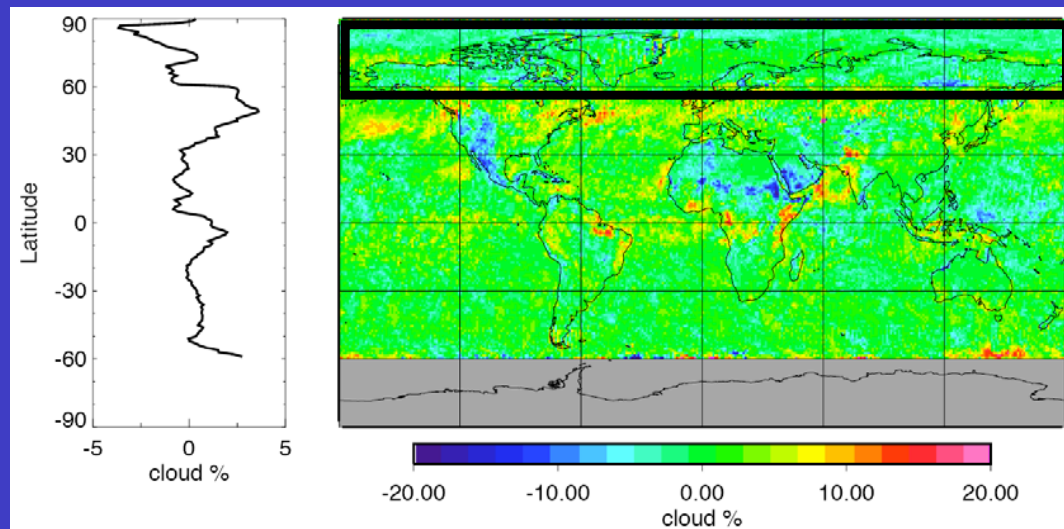

# Daytime ISCCP-D2-like -- SRBAVG Cloud Fraction, Terra, July 2002

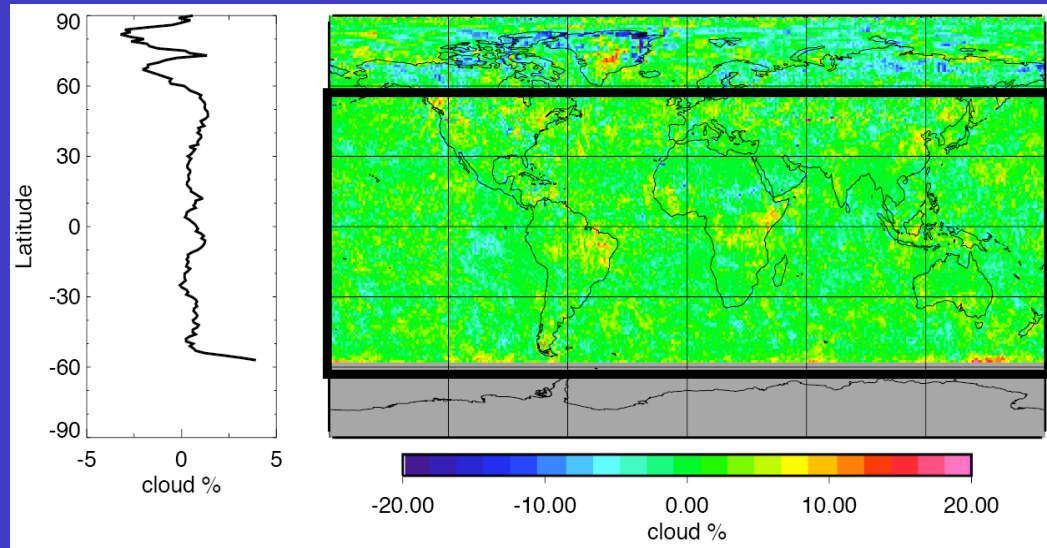

Local Hour=11

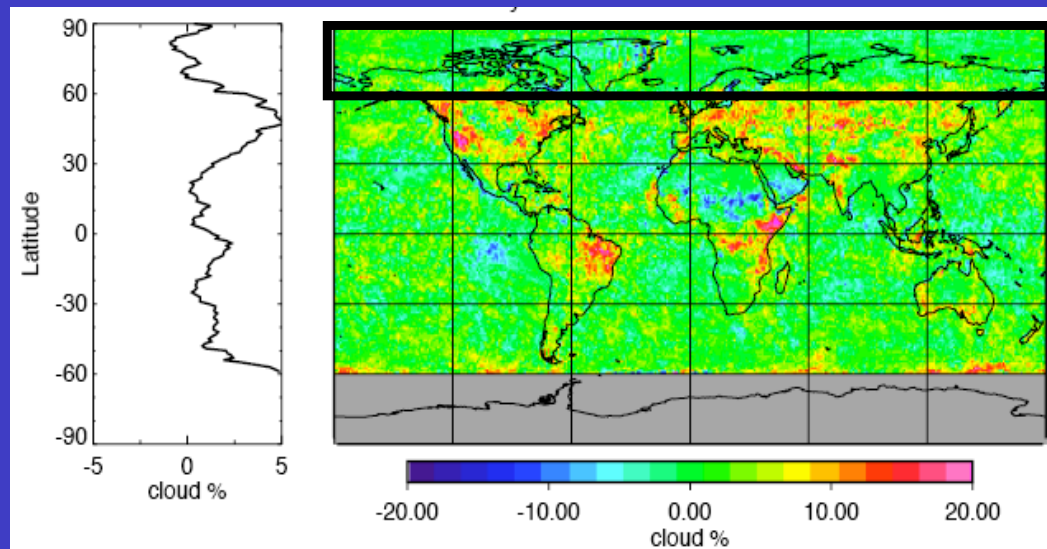

All daytime hours  
(SZA < 82)

# Daytime ISCCP-D2-like -- SRBAVG Cloud Fraction, Aqua, July 2002

Local Hour=14

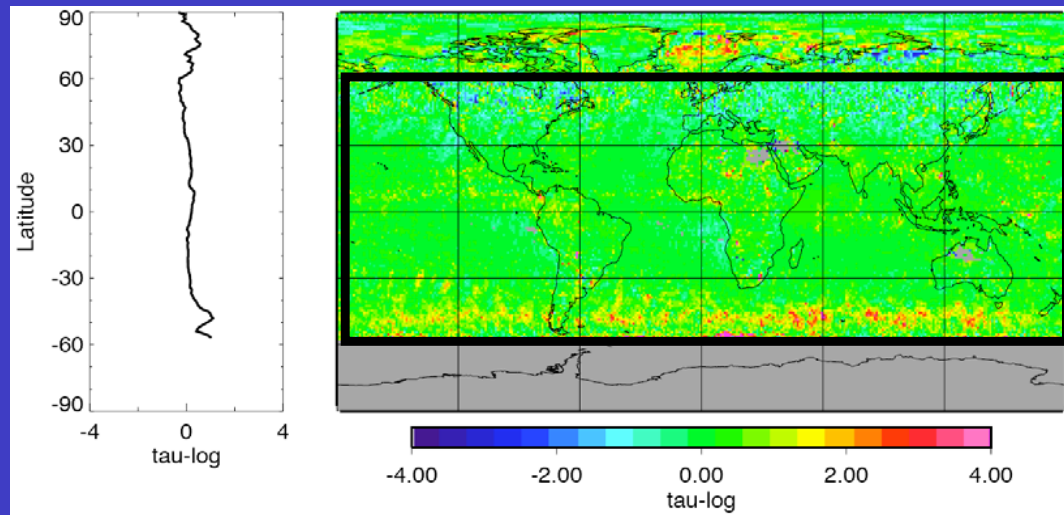

All daytime hours

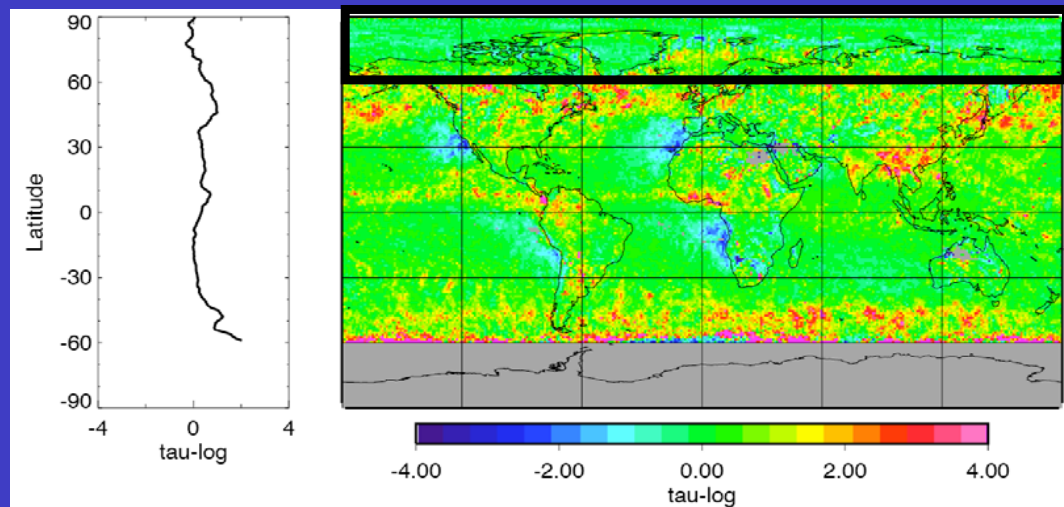

NASA Langley Research Center / Atmospheric Sciences

# Daytime ISCCP-D2-like -- SRBAVG log optical depth, Terra, July 2002

Local Hour=11

All daytime hours

NASA Langley Research Center / Atmospheric Sciences

# Daytime Terra Summary, Global, July 2002

	ISCCP-D2like	SRBAVG	BIAS	Relative BIAS(%)	Cloud Group	
					Day	Night
cld	62.95	62.04	0.92	<b>1.48</b>	65.1	
peff	645.02	623.28	21.74	<b>3.49</b>	x	
teff	264.47	262.52	1.95	<b>0.74</b>	x	
log_tau	4.85	4.43	0.42	9.48	x	
lwp	112.34	78.37	33.97	<b>43.35</b>	103.34	72.45
reff	13.99	13.2	0.79	5.98	13.53	
iwp	256.27	170.08	86.19	<b>50.68</b>	249.95	78.10
deff	53.88	50.2	3.69	7.35	55.36	
emiss	0.85	0.81	0.03	<b>3.70</b>	x	

- Statistics are based on the SRBAVG daytime comparison
- The large LWP/IWP differences between ISCCP-like and SRBAVG are due to the large differences between the MODIS day and night retrievals. SRBAVG temporally interpolates between day and night.

# CERES ISCCP-D2-like GGEO Product

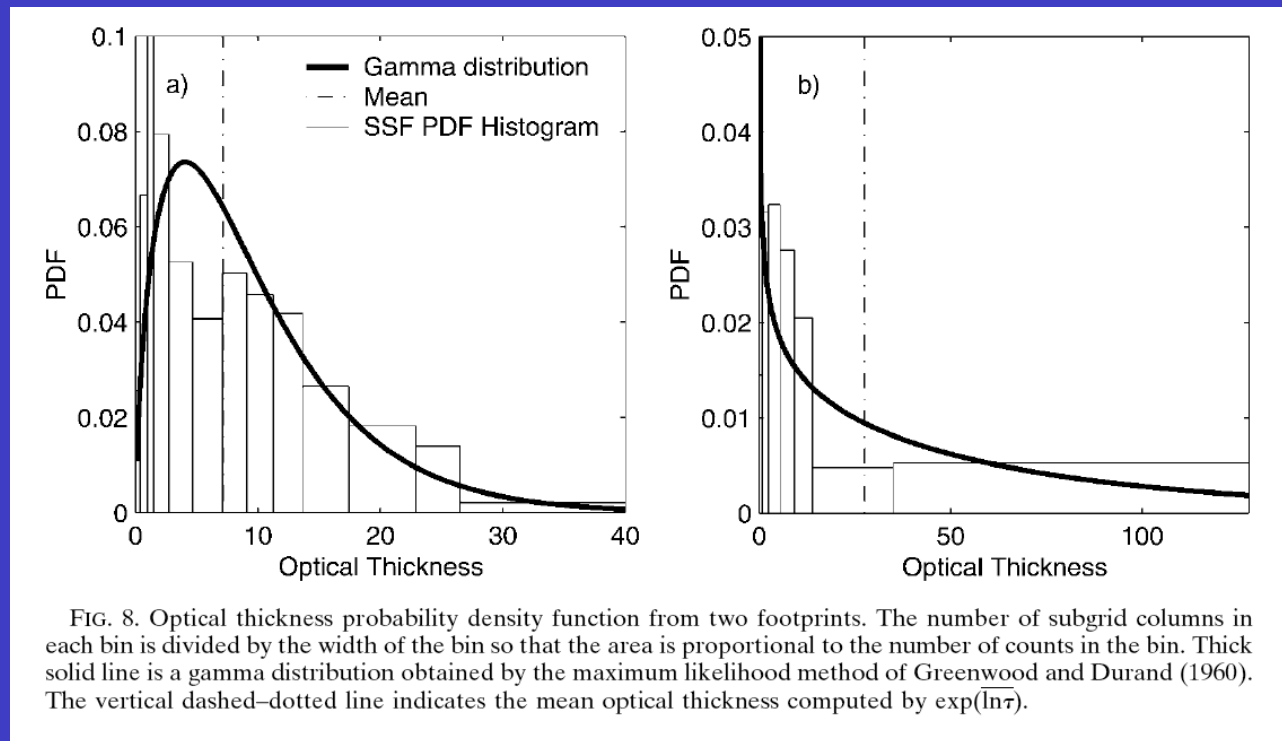

- Use existing GGEO product
  - 5 geostationary satellite, 3-hourly GMT, nominal 8km, 2-channel (visible and IR), (60°S to 60°N) daytime cloud property retrievals
  - GEO radiance are normalized to MODIS calibration
  - Clear-sky determined by GEOS4 clear-sky predicted brightness Temperatures and MODIS monthly clear-sky albedo maps
  - Assume 10 $\mu$ m radii liquid and 60 diameter  $\mu$ m ice particle sizes (same as ISCCP project)
  - Retrieve cloud amount, temperature, pressure, optical depth and LWP or IWP based subset of CERES-MODIS algorithm
  - Spatially gridded into 1° latitude by longitude regions and 4 static cloud pressure layers (SFC-700mb, 700-500mb, 500-300mb, 300-100mb)

# GGEO Product method

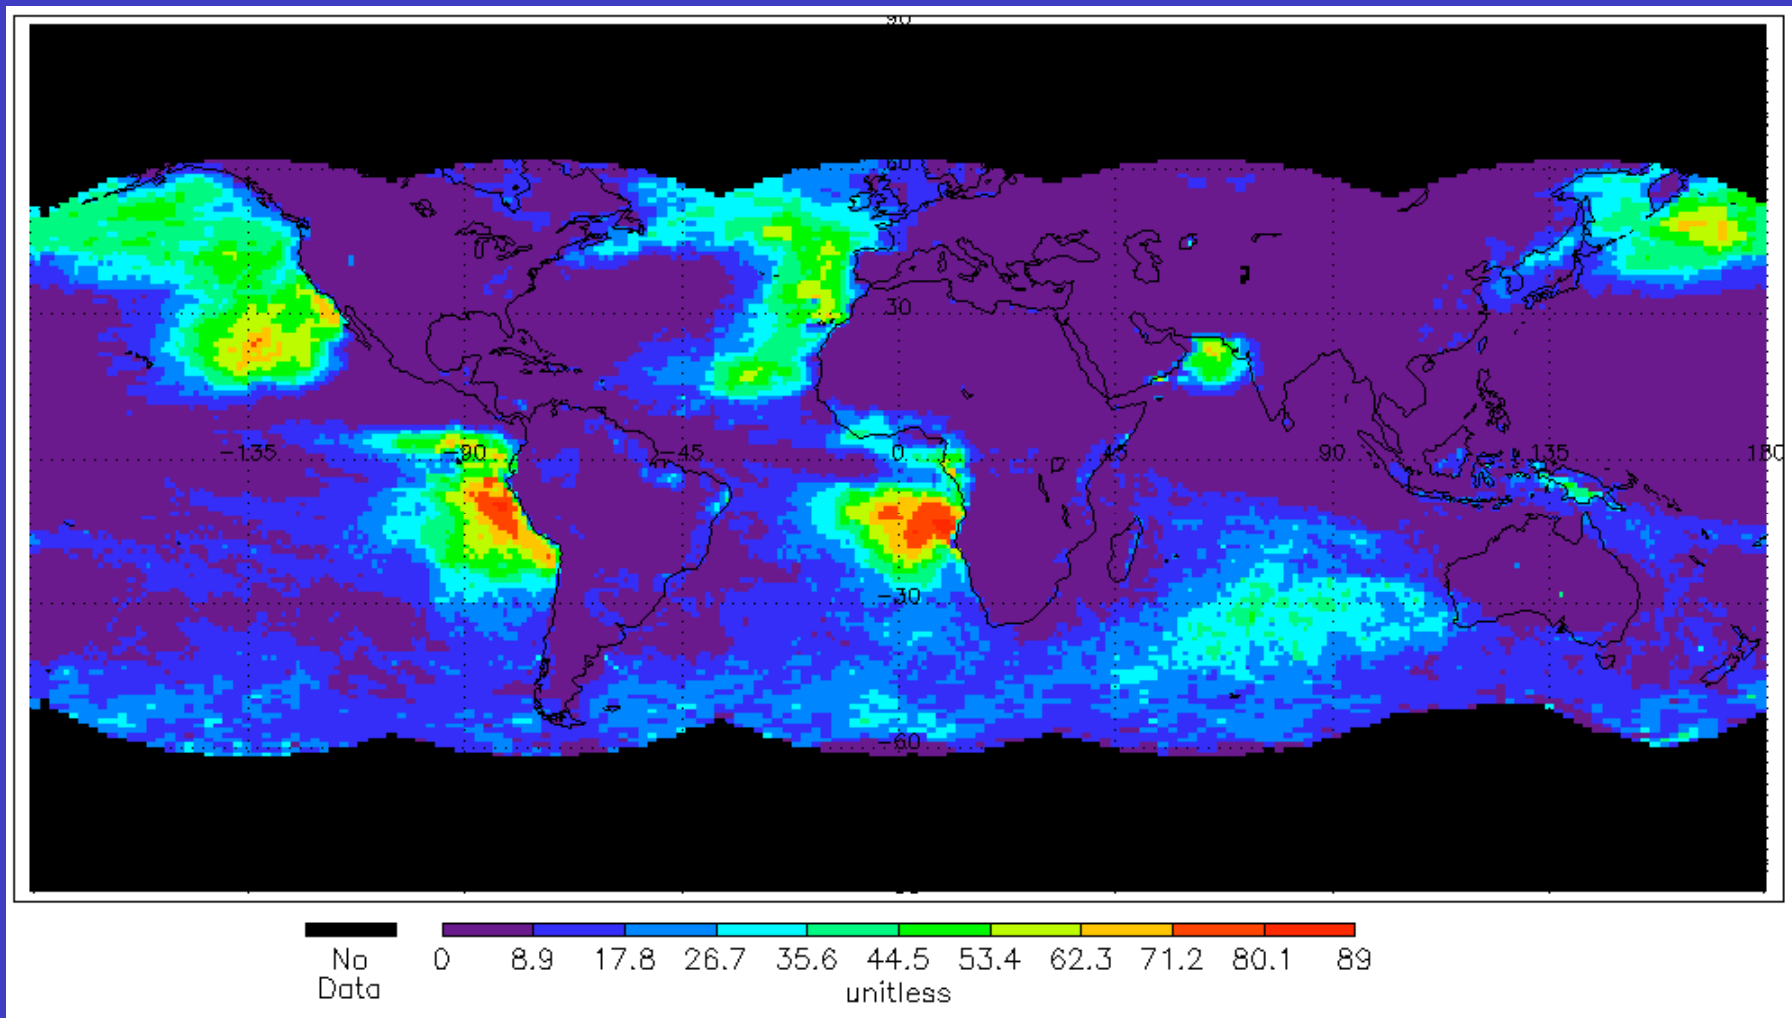

- Use gamma distribution
  - using log and linear optical depth to back out optical distribution for each of the layers

*Kato S., F. Rose and T. Charlock, P158., J. A.O. Tech. 2004*

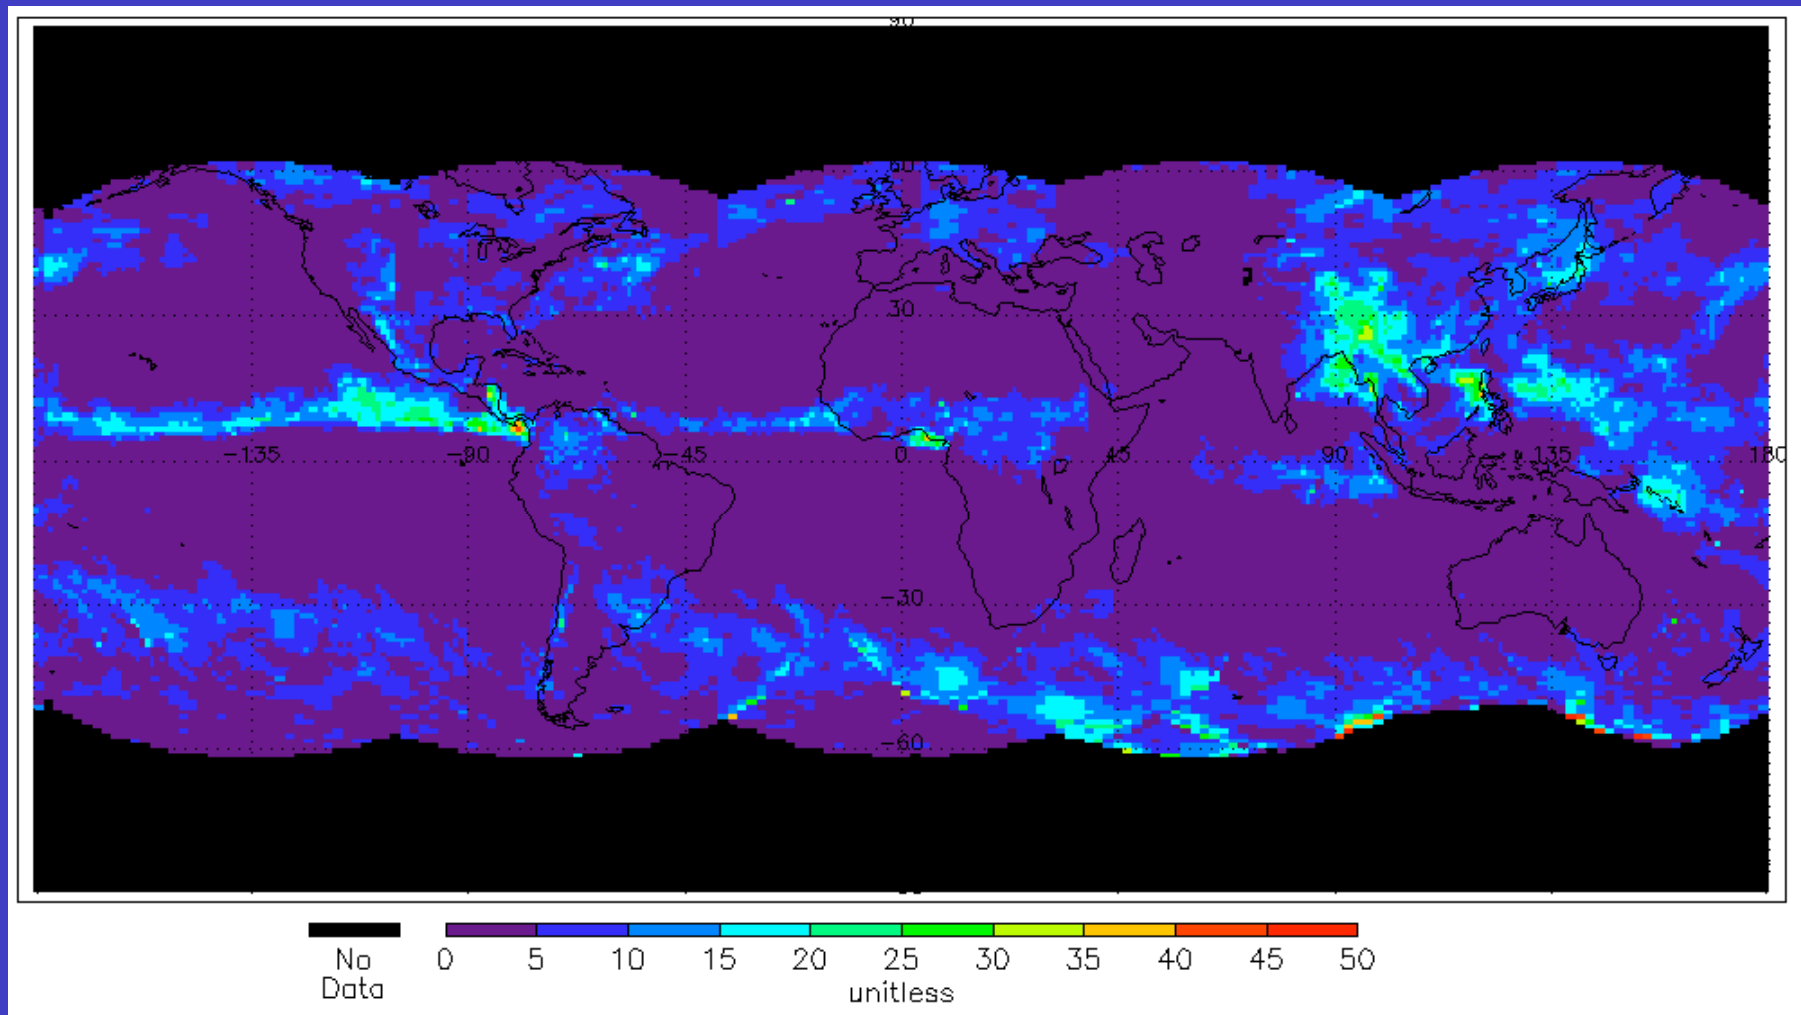

# Daytime GGEO Stratocumulus (low,mid thin) Cloud Fraction, July 2002

**NASA Langley Research Center / Atmospheric Sciences**

# Daytime GGEO Deep Convective (high,thick) Cloud Fraction, July 2002

**NASA Langley Research Center / Atmospheric Sciences**

# CERES ISCCP-D2-like GGEO Validation

- Compare total cloud property summed from ISCCP-D2-like GGEO sub-cloud types to that of SRBAVG(GEO only) for consistency
  - SRBAVG product does not include GEO snow or glint retrievals.
  - SRBAVG daytime is based on all daylight hourboxes and includes interpolation, ISCCP-D2-like daytime is defined by  $SZA < 82^\circ$  and performs no interpolation.

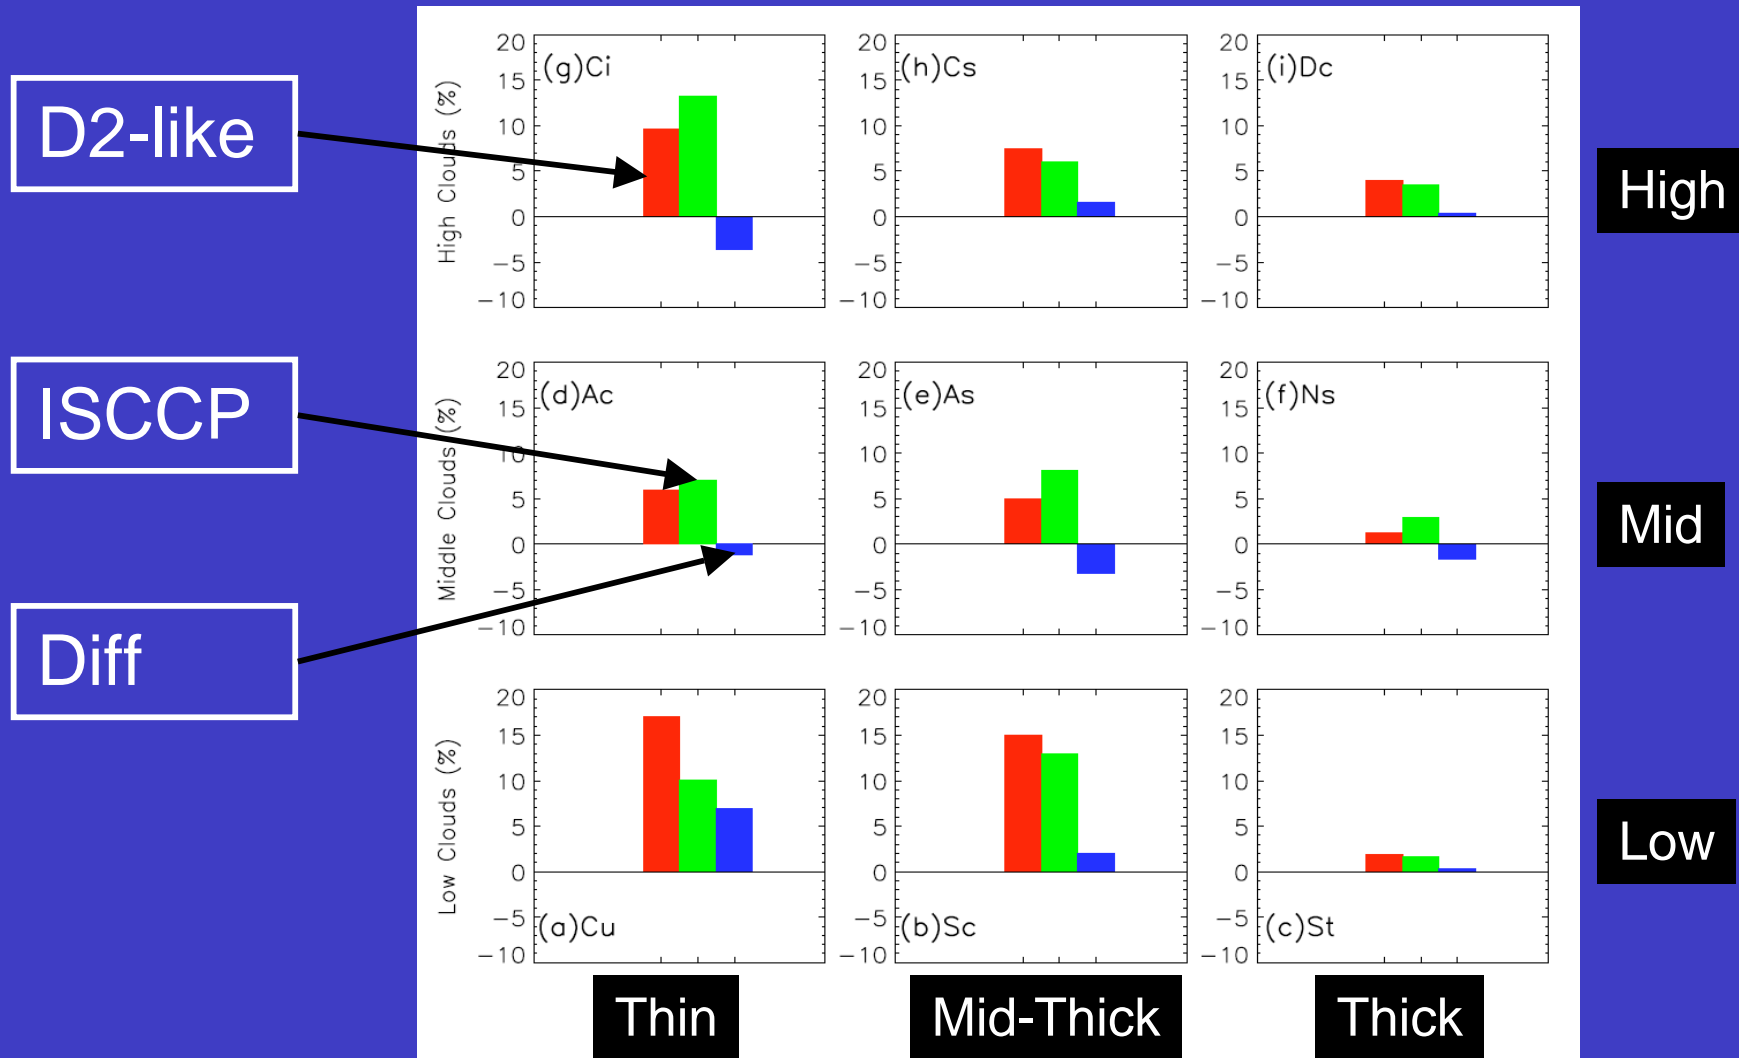

# Daytime D2-like GGEO Summary, Global July 2002

	ISCCP-D2like	SRBAVG	BIAS	Relative BIAS(%)
cld	65.32	64.12	1.20	<b>1.87</b>
peff	638.99	638.54	0.44	<b>0.06</b>
teff	264.08	264.48	-0.40	<b>-0.15</b>
log_tau	3.62	3.77	-0.16	<b>-4.24</b>
lwp	30.76	x		
iwp	162.14	x		

# ISCCP-D2-like (GGEO) vs. ISCCP July 2002 Global

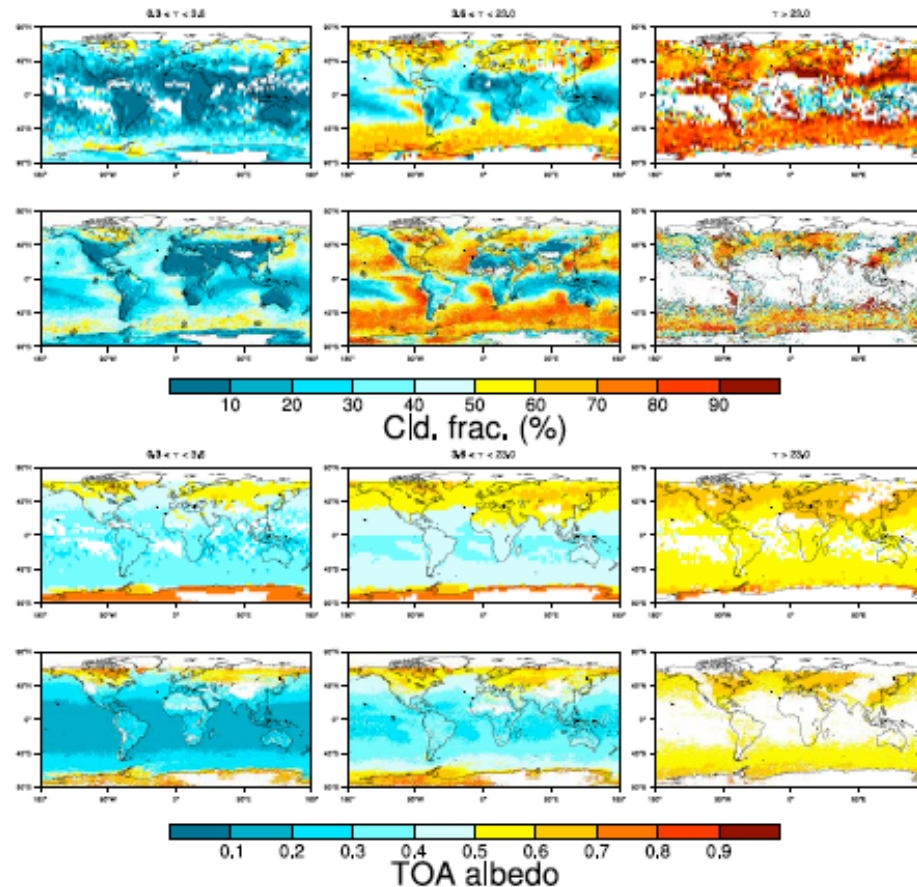

# Current Status and Future plan

1. ISCCPD2-like MODIS (Day and Night) has been submitted (03/28).
2. ISCCPD2-like GGEO close to delivery subject to further validation (~1 month).
3. Propose to combine MODIS and GEO datasets to form one optimal ISCCPD2-like dataset.
4. Propose to add CERES fluxes associated to ISCCPD2-like cloud types.

# Propose future ISCCP-like cloud properties with associated CERES fluxes Product

Low cloud cloud fraction and TOA albedo (January)

J. Cole etc.

NASA Langley Research Center / Atmospheric Sciences

# Propose future ISCCP-like cloud properties with associated CERES fluxes Product

# ISCCPD2-like Flux Proposal

## Assumption:

- clear-sky BB flux can be estimated using a narrow-to-broadband radiance+ADM conversion.
- broadband flux ( $F1\_est$  and  $F2\_ext$ ) for each of the two cloud layer can be estimated by MODIS radiance.
- The ratio of the BB flux for the two cloud layers is equal to the ratio of the two estimated BB flux as above.

By Norman Leob
