

Monthly Cloud Averages (ISCCP-D2like-Mrg)

The Monthly Gridded Cloud Averages (ISCCP-D2like-Mrg) archival data product contains monthly and monthly 3-hourly (GMT-based) $1^{\circ} \times 1^{\circ}$ gridded regional daytime mean cloud properties as a function of 18 cloud types, similar to the [ISCCP D2](#) product, where the cloud properties are stratified by pressure, optical depth, and phase. The Mrg product combines daytime cloud properties from Terra-MODIS (10:30 AM local equator crossing time LECT), Aqua-MODIS (1:30 PM LECT), and geostationary satellites (GEO) to provide the most diurnally complete daytime ISCCP-D2like product. The GEO cloud properties have been normalized with MODIS for diurnal consistency. The CERES MODIS-derived cloud properties are not the official NASA MODIS cloud retrievals, but are based on the CERES cloud working group retrievals that are also available in other CERES products. The CERES MODIS-derived cloud properties provide coverage from pole to pole. The 3-hourly GMT-based GEO cloud properties come from five satellites at 8km nominal resolution with coverage limited to 60°N to 60°S . The GEO daytime cloud retrievals incorporate only a visible and IR channel common to all geostationary satellites for spatial consistency. The geostationary calibration is normalized to Terra-MODIS. The GEO cloud properties are from the same source as for those in the SYN1deg product; however they are not temporally interpolated. The Single Scanner Footprint TOA/Surface Fluxes and Clouds (SSF) archival data product and the Gridded GEO Narrowband Radiances (GGEO) archival data product are the inputs to this product. Each ISCCP-D2like-Mrg file covers a single month using the SSFs from the CERES instrument that is in cross-track scan mode. The science data are Scientific Data Sets (SDSs) with multiple records. Each record contains spatially averaged data for an individual region.

The major category of data output on the ISCCP-D2like-Mrg HDF file is:

- D2like-Mrg 18 Cloud Types for Monthly 3-Hourly/Monthly

ISCCP-D2like-Mrg Metadata

The ISCCP-D2like-Mrg metadata are summarized in [Table 1](#). These metadata contain information that need only be recorded once per product. The CERES metadata are listed in [Appendix B](#). [Table B-1](#) lists the CERES Baseline Header Metadata and [Table B-2](#) lists the CERES_metadata Vdata.

ISCCP-D2like-Mrg Scientific Data Sets

The ISCCP-D2like Mrg product contains Scientific Data Sets (SDS) of gridded cloud parameters. The SDSs are divided into tables that map to Vgroups in the HDF file. [Table 2](#) and [Table 3](#) list the Vgroups following the HDF file structure. The SDSs are 2-, 3-, or 4-dimensional arrays where the last two dimensions refer to the latitude and longitude of the regions; the latitude/longitude grid is defined in [Table 5](#). In 3- and 4-dimensional arrays, the first and second dimensions may refer to the temporal averaging time index in [Table 4](#) or to the 18 cloud types in [Table 6](#).

[Table 7](#) and [Table 8](#) list the cloud parameters by Vgroup and in order of SDS index number. Each table contains a list of the parameters for one Vgroup, including SDS index, SDS name, data type, units, range, and dimensions within each SDS.
