

Part III

Consistency Check of the mean radiance and irradiance

SSF ed. 1

**Seiji Kato, Norman G. Loeb, Erika B. Geier,
and**

Sandra K. Nolan

We define the angular distribution model of radiance such as

$$ADM(\mu, \phi, \mu_0) = \frac{\pi I(\mu, \phi, \mu_0)}{\int \mu I(\mu, \phi, \mu_0) d\Omega}.$$

To compute the irradiance, we apply the model

$$F(\mu, \phi, \mu_0) = \frac{\pi I'(\mu, \phi, \mu_0)}{ADM(\mu, \phi, \mu_0)} = \frac{I'(\mu, \phi, \mu_0)}{I(\mu, \phi, \mu_0)} \int \mu I(\mu, \phi, \mu_0) d\Omega$$

Therefore, the irradiance in edition 1 is

$$F_{ed1}(\mu, \phi, \mu_0) = \frac{\pi I_{ed1}(\mu, \phi, \mu_0)}{ADM_{r4}(\mu, \phi, \mu_0)} = \frac{I_{ed1}(\mu, \phi, \mu_0)}{I_{r4}(\mu, \phi, \mu_0)} \int \mu I_{r4}(\mu, \phi, \mu_0) d\Omega.$$

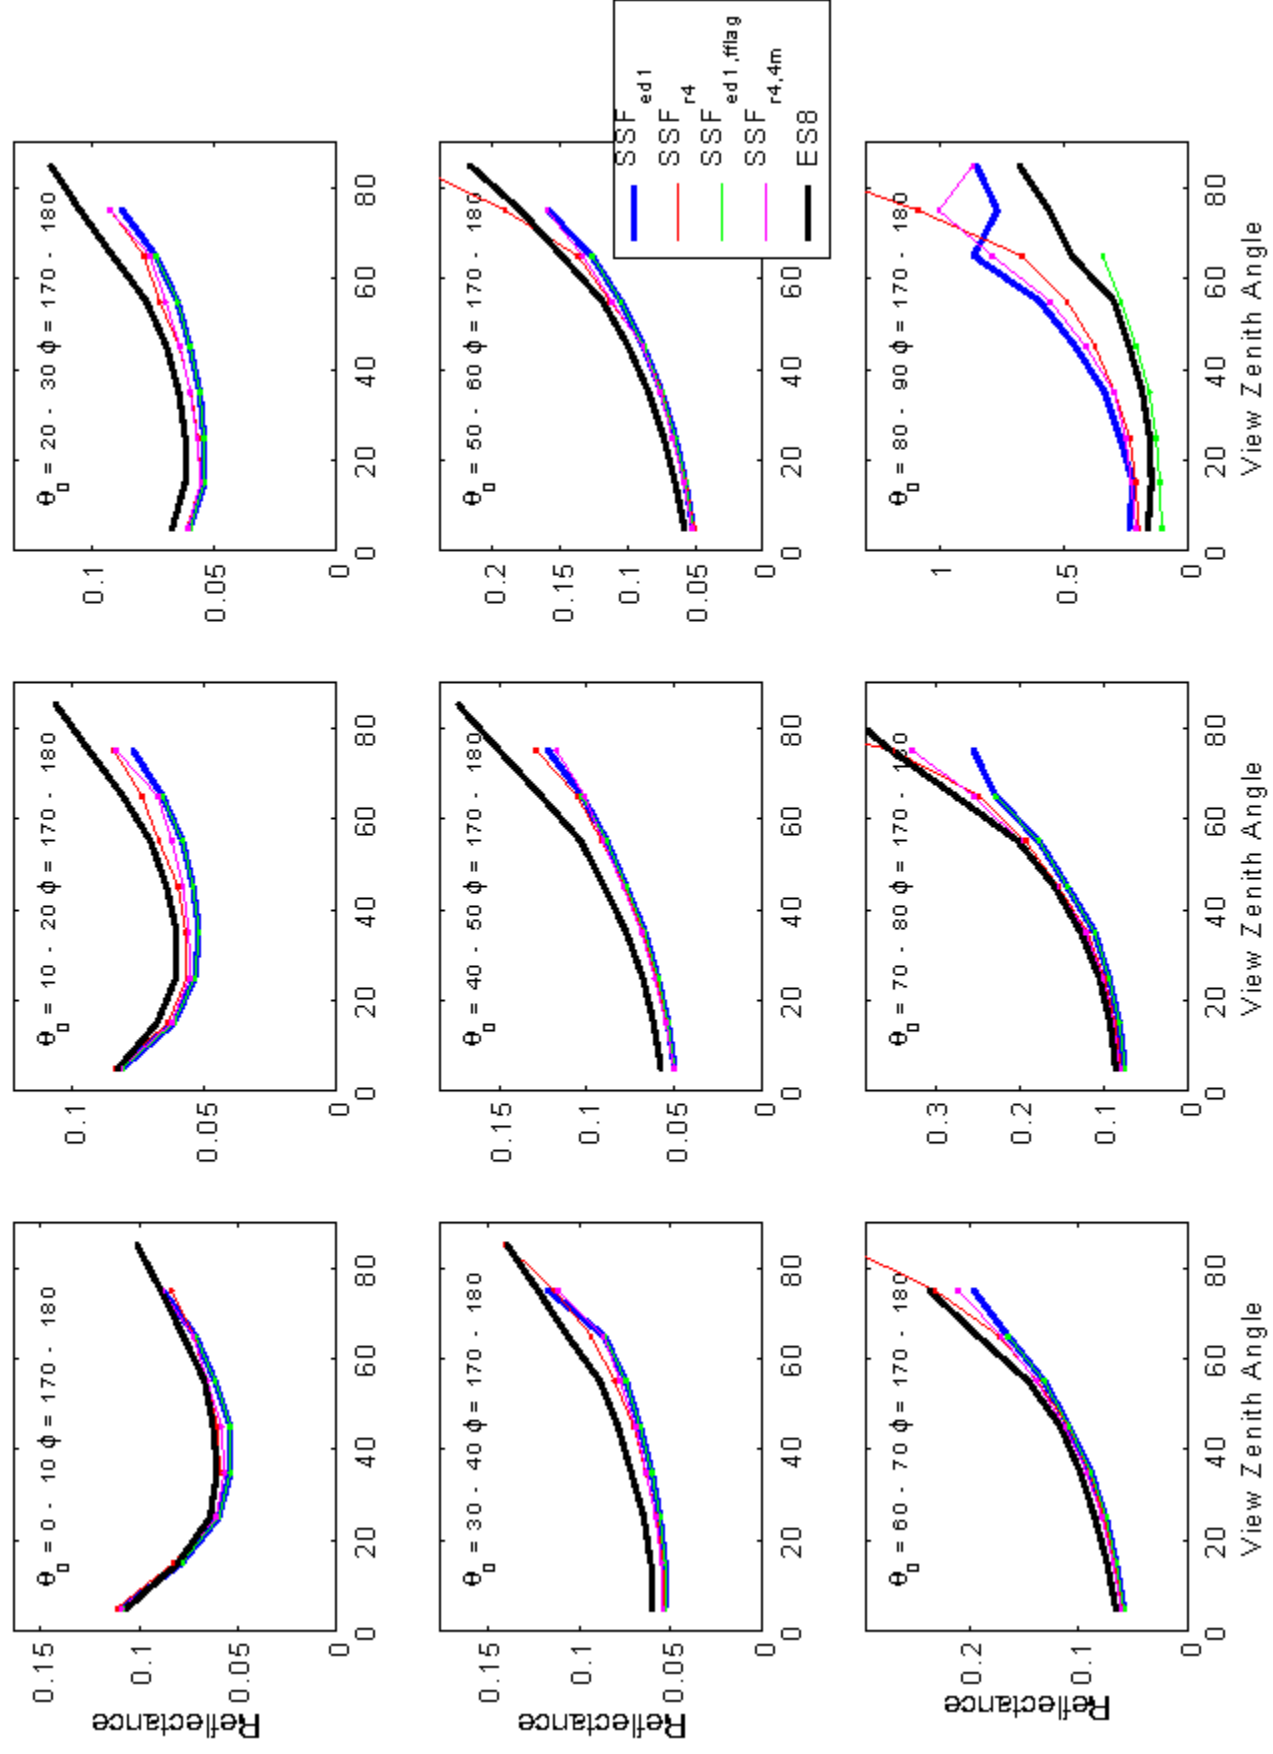

The irradiance in ES8 with edition 1 scene ID is

$$\begin{aligned} F_{es8,ssf}(\mu, \phi, \mu_0) &= \frac{\pi I_{ed1}(\mu, \phi, \mu_0)}{ADM_{es8}(\mu, \phi, \mu_0)} \\ &= \frac{I_{ed1}(\mu, \phi, \mu_0)}{I_{es8}(\mu, \phi, \mu_0)} \int \mu I_{es8}(\mu, \phi, \mu_0) d\Omega. \end{aligned}$$

Longwave Clear-sky Ocean

Clear-sky Ocean Mean radiance

1. The radiance in SSF ed 1 is higher than that in SSF r4 because of the scene ID difference in the sun glint region when the solar zenith angle is smaller than 30° .
2. The radiance in SSF ed 1 is lower than that in ES8 (except for the sun glint region and almost all angles when the solar zenith angle is greater than 80°).

Clear-sky Ocean Mean Irradiance

1. The irradiance in SSF ed 1 is lower than that in ES8 for all view zenith and solar zenith angles.

An arithmetic average of 4 month of data is

$$\text{SSF ed. 1} \quad 73.8\text{Wm}^{-2}$$

$$\text{ES8/SSF} \quad 72.1\text{Wm}^{-2}$$

$$\text{ES8 (4months)} \quad 81.3\text{Wm}^{-2}$$

$$\text{ES8 (8months)} \quad 79.5\text{Wm}^{-2}$$

2. The irradiance increases as the view zenith angle decreases when the solar zenith angle is between 0 to 10 degrees because of scene ID difference between r4 and ed. 1.

Clear-sky Desert

1. The radiance and irradiance in SSF ed. 1 is greater than those in ES8, which caused by scene ID difference.
