The graph shows the total solar flux (W/m²) over a period from March 2000 to September 2001, with data points for FM-2, FM-1, and NOAA-9. The flux values fluctuate significantly, peaking in January 2001 for FM-2 and FM-1, and throughout the period for NOAA-9. The data indicates variations in solar flux that may correlate with seasonal changes or other environmental factors.
FM-2 Annual Mean = 2.6 W/m²
FM-2 Annual Mean = 3.7 W/m²
FM-2 Annual Mean = 8.6 W/m²
