This is the last Ada PGE to be delivered to the new <i>AMI</i> system. Once all the Ada PGEs have been through CERES CM and SIT testing, the Instrument Subsystem can officially be taken off of <i>warlock</i>. (Cooper) The problem with the BDS compression program is still being worked. Bob Grandel is helping to determine the cause of the problem. However, at this time, the program works for him on both the P6 and x86 without issues. Thomas is working with Bob to determine what the differences are in their environments. (Grepitotis) There is a possibility that the Edition3 gains delivered in November will be recalled and all of the processed Edition3 BDS/IES files will need to be reprocessed once a new set of gains is delivered. An error in determining the ground to flight shift was discovered after the processing had completed. The four part adjustment (SW, LW day, WN and LW night) also applies for Inversion radiances. (Walikainen)

⁶ Prod. Platform (TK ver)	15, 16	Indicates with which version of toolkit the PGE executable was compiled. 15=Version 5.2.15, 16=5.2.16 (Note: IBM PGEs only)
⁵ Toolkit ver16 Tested		Criteria for defining Toolkit Version 16 Tested column value equal to "P4", "P6", "X86": If PGE is in production on P4 and compiled already with TK 15, does the existing executable work with TK 16 as long as LD_LIBRARY_PATH points to TK 15? If PGE not already compiled for production, does it compile and work with TK 16? For the P6/X86, does the version of s/w being tested on the P6/X86 work with TK 16?
