

_CERES SCF Working Group STATUS Table for Dec. 11, 1996

<i>DESCRIPTION</i>	<i>Status</i>	<i>Problems</i>
Thunder status	The filesystem reconfiguration resulted in subsystem 1 gaining 4GB of disk space and TISA (ggeo) gaining 5GB. Along with increasing SWAP space from 256MB to 4GB. We will install the remaining .8GB of memory this weekend.	It appears that the processes that are using the libraries go into a sleep mode, resulting in a major bog down of thunder. The only way to correct this problem is to reboot the system and clear out any hidden children processes that may be running under the sleeping processes.
Sun and SGI HW upgrades	Off site SGI upgrades underway.....	
High speed Connection to the DAAC & Bldg. 1250 Network	The network upgrades are underway. We have upgraded 13 systems so far.	
SAIC Network WAN/ LAN	WAN connection still under investigation.	
new mail application (zmail)	We are investigating Intrigue (this application runs on the workstation and supports running Office applications under NT).	
NearLine Storage	EMASS rep. contacted regarding demo AMLJ. This system holds DLT 4000 (currently) and soon DLT 7000 utilizing AMASS software.	
Sun Solaris upgrade	Only a few systems remaining.
