

## \_CERES SCF Working Group STATUS Table for December 10 1997

| <i>DESCRIPTION</i>                                | <i>Status</i>   | <i>Problems</i>   |
|---|---|---|
| <b>Thunder &amp; Lightning (Origin 2000)</b>      | The process is still underway to assign disk space to the working groups. Both systems are operational and the NFS mounting of the file systems between thunder and lightning is operating flawlessly |   |
| <b>High speed Connection to the DAAC from ASD</b> | The NFS mounted DAAC file systems are in use by both thunder and lightning.   | Transfer rates are not acceptable. Investigations are underway to determine why. The DAAC and ASD System Administrators are working together to define what problems may be causing the variable transfer rates. We have tried several different tuning aspects on thunder to improve performance. It has been very difficult to test the enhancements due to Samantha crashing. This crashing has also caused problems with thunder's operation. |
| <b>helpdesk automation</b>                        | no updates  |   |
| <b>NIS+</b>                                       | We have a small Alpha set of clients and servers that we are testing at this time.  |   |
| <b>Security</b>                                   | no updates  |   |
| <b>ASD web server</b>                             | no updates.   |   |
| <b>Additional SA support</b>                      | We are working out the logistics to provide weekend coverage for the on and offsite systems. Stay tuned....   |   |
