

## CERES SCF STATUS for Mar 29,2000

<i>DESCRIPTION</i>	<i>Status</i>	<i>Problems</i>
<b>Thunder &amp; Lightning</b>	No changes. Only network problems as noted below.	
<b>Ntrigue/Citrix Metaframe servers</b>	New off-site and on-site terminal servers are in use. All off-site users are now off of the Ntrigue server. On-site: This week, we are in the process of moving users to the new terminal servers and expect to be completed by Monday April 3.	
<b>PGS Toolkit</b>	Joe has finished the testing of the toolkits and their compatibility with cereslib and the new toolkit is currently being used for code development.	
<b>Security</b>	NASA network support performed a security scan during peak working hours during the week of the 24th, our logs detected their connections as the scan began. This created network problems as noted below.	
<b>AMLJ Re-configuration</b>	Upgrade completed and currently developing the frount-end client.	
<b>Tape Library</b>	Upgrades to the floor, AC-unit and electrical are waiting appropriate paperwork. It is proposed that the construction will be done in two stages so it would not interrupt operations in the Tape Library, although a single day of downtime is anticapted.	
<b>On site network problems</b>	Week of Mar 20 - 24: Network probes by Network Support during the day caused several NT servers and other network services to go down. We have brought this to the attention of Network Support. Further meetings to discuss problems and possible solitions of network problems will be done 1st part of April.
