Description of Change (non-Science):  
Req. 1-87: Update the CER1.4P3 ancillary data directory to have gain and offset directories with subdirectories for editions and instruments. Also update the scripts to read the gain and offset files from the new directory structure.

Reason for Change (non-Science):  
Req. 1-87: Updating the directory structure for the CER1.4P3 ancillary directory will make it easier to maintain the gain and offset files for all of the editions for each instrument.

=====

Subsystem: CATALYST                      SCCR Date & TIME: 2016-02-16 15:28:36                      SCCR No.: 1111

Parameter Change: ( ) YES (X) NO

Description of Change (Science):  
N/A

Reason for Change (Science):  
N/A

Description of Change (non-Science):

1. Corrected "Use of uninitialized value \$time\_str in pattern match..." warning messages in xmlrpc.log.
2. Corrected handling of Edition4 notifications in SCCD/SCCN files in ANGe interface.
3. Enabled support for zonal PGEs (e.g. 201501Z001, 201502Z090).
4. Enabled support for additional PGE-specific SGE\_Driver command line arguments (e.g. "-satellites ggeo terra aqua").
5. Tweaked ordering of SGE ID numbers in calls to "qacct" to be FIFO order, not LIFO.
6. Added product mappings to support Edition4 TSI/SYNI and SSF1deg processing streams.

Reason for Change (non-Science):

1. Runtime warning message can appear when a job fails to launch and the SGE start/end times are not assigned. A routine in the XMLRPC interface that makes timestamps conform to a single format emits this message.
2. Edition4 SCCD/SCCN were not handled by the CATALYST ANGe interface. This results in the warning "unable to classify CER\_SCCN:Terra-FM1:Edition4" in the "ange.log" file.
3. PGE handler CER7.2.1P2 (introduced in SCCR 1068) runs on a zonal granularity. Needed to add support to CATALYST so the correct SGE\_Driver arguments are called.
4. PGE handlers CER7.3.1P3 and CER7.3.1P4 have an additional command line requirement specific to only those PGEs. The CATALYST kernel needed to be modified so that those additional arguments are included with the standard arguments for that PGE granularity.
5. The order by which the calls to SGE's "qacct" command had been running in a LIFO order. Reordering this results in faster launching of new jobs, particularly so when SPG\_ops disk system is under higher load.
6. PGEs included with SCCR 1068 and 1101 require additional products not already covered by the PGEs delivered with SCCR 1067 and 1094. These new product mappings will allow the new PGEs to identify the existence of their input products using the CATALYST logdb.
